

Figure 2. Neuropsychological Performance Among Patients with Schizophrenia and Other Psychoses at Baseline and Follow-Up^a.

*

^a - Effect sizes (expressed in standardized [z] scores) and 95% Confidence Intervals (95%CI) of difference from comparison subjects at baseline and follow up. Comparison subjects set to zero (dotted line). Effect sizes are adjusted for age, sex, ethnicity, and level of education. 95% CI that do not include zero indicate statistical significance level $p < 0.05$. Trailmaking A=Trail Making Test, Part A; Trailmaking B=Trail Making Test, Part B.
