

Table 3. Linear regression model predicting wellbeing of HCWs, including the potential interaction between job stress and centre use (n=797).

Variable	B	p value	95% CI
Constant	3.15	<.001	2.98 – 3.33
Wellbeing centre use	.17	<.001	.09 – .26
Sex	-.10	.18	-.24 – .04
Age	.06	.002	.02 - .10
Job stress	-.31	<.001	-.36 – -.26
Job stress x wellbeing centre use	-.01	.83	-.05 – .04
