7      **List of Figures**

8      S1	Predicted elastoplastic (EP) load-settlement curves of single piles and comparison 9      with Poulos (1989) and Basile (1999). The scenario consists of a single pile with 10     length $L_p = 30$ m, diameter $d_p = 0.75$ m, a 50 m deep soil layer, pile Young's 11     modulus $E_p = 30$ GPa and $30 \cdot 10^3$ GPa, soil Young's modulus $E_s = 1056$ MPa and 12     Poisson's ratio $\nu_s = 0.49$ , and a limiting shear stress of the shaft $\tau_f = 220$ kPa. . . . .	3
13     S2	Tunnelling adjacent to a single pile in a layered ground: elastic validation analyses 14     (fixed $E_{s,0}^{L,2} = 24$ MPa). . . . .	4
15     S3	Tunnelling adjacent to a single pile in a layered ground: the effects of soil behaviour 16     (fixed $E_{s,0}^{L,2} = 24$ MPa). . . . .	4
17     S4	Tunnelling adjacent ( $z_t = 20$ m) to the pile group with $L_P = 25$ m: low initial safety 18     factor $SF_0 = 1.5$ . . . . .	5
19     S5	Tunnelling adjacent ( $z_t = 20$ m) to the pile group with $L_P = 25$ m: high initial 20     safety factor $SF_0 = 5$ . . . . .	5
21     S6	Tunnelling beneath ( $z_t = 20$ m) the pile group with $L_P = 15$ m: low initial safety 22     factor $SF_0 = 1.5$ . . . . .	6
23     S7	Tunnelling beneath ( $z_t = 20$ m) the pile group with $L_P = 15$ m: high initial safety 24     factor $SF_0 = 5$ . . . . .	6

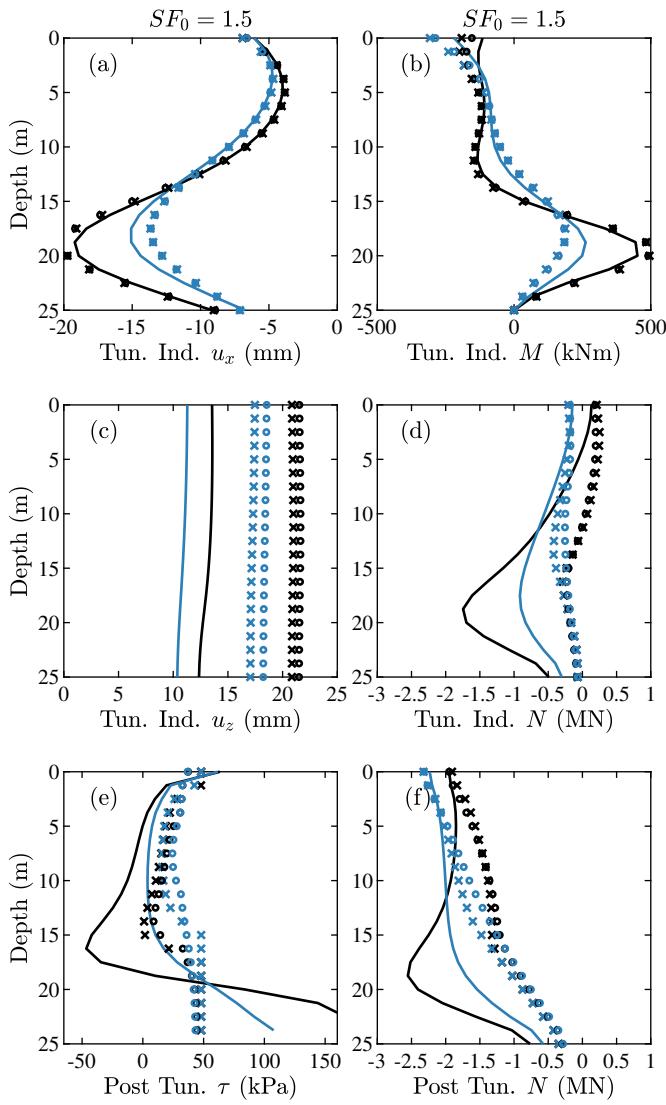

**Fig. S1.** Predicted elastoplastic (EP) load-settlement curves of single piles and comparison with Poulos (1989) and Basile (1999). The scenario consists of a single pile with length  $L_p = 30$  m, diameter  $d_p = 0.75$  m, a 50 m deep soil layer, pile Young's modulus  $E_p = 30$  GPa and  $30 \cdot 10^3$  GPa, soil Young's modulus  $E_s = 1056$  MPa and Poisson's ratio  $\nu_s = 0.49$ , and a limiting shear stress of the shaft  $\tau_f = 220$  kPa.

**Fig. S2.** Tunnelling adjacent to a single pile in a layered ground: elastic validation analyses (fixed  $E_{s,0}^{L,2} = 24 \text{ MPa}$ ).

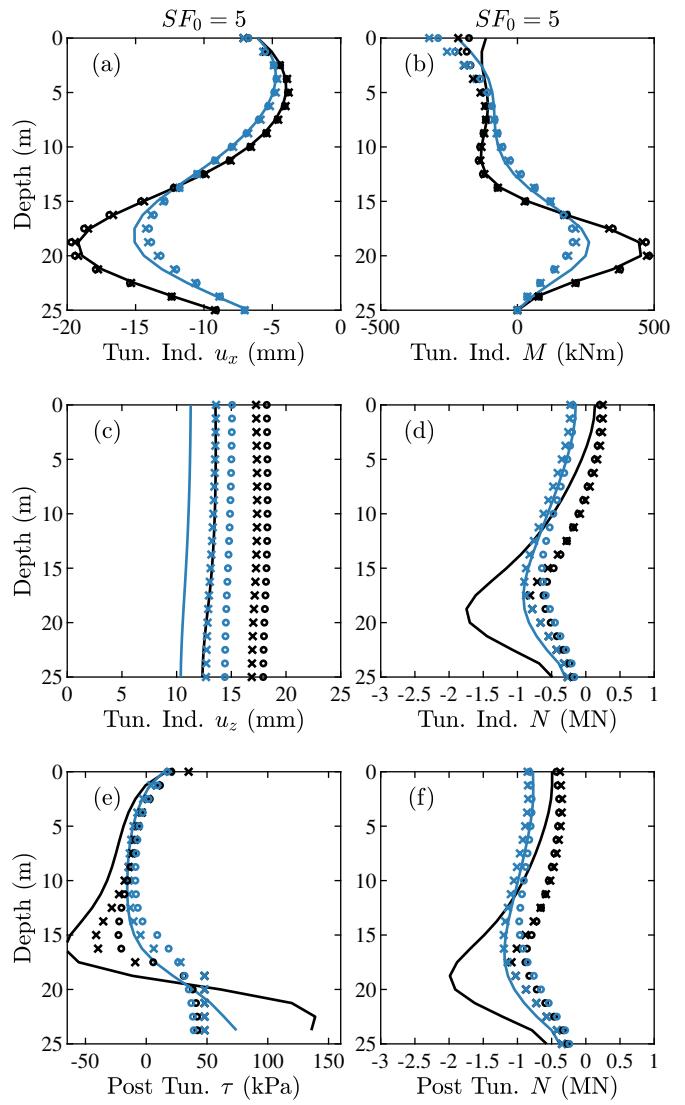

**Fig. S3.** Tunnelling adjacent to a single pile in a layered ground: the effects of soil behaviour (fixed  $E_{s,0}^{L,2} = 24 \text{ MPa}$ ).
