The chemical structure of the drug trandolapril has been corrected in Figure 4c. The conclusions of the work have not been affected by this correction.

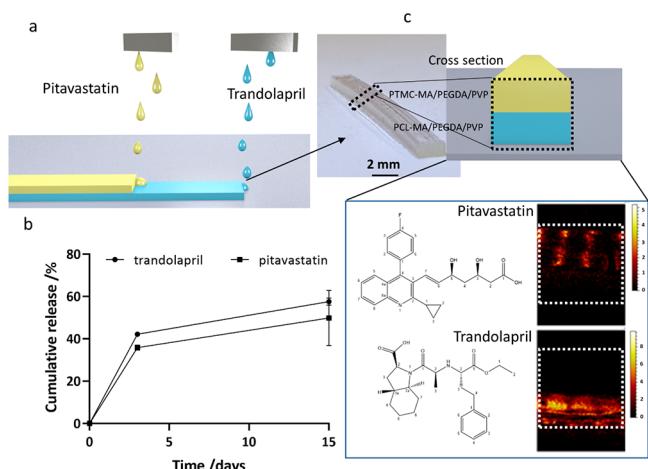

Figure 4. 3D-printed multidrug implant exemplar for the co-delivery of the drugs pitavastatin (top) and trandolapril (bottom). (a) Schematic representation of the implant showing the relative positions of the drug-loaded portions and image of the 3D-printed implant showing its appearance. (b) Cumulative drug release of both drugs over 5 and 15 days ($n = 3, \pm SD$). (c) ToF SIMS images on the implant cross section representing the negative ions of pitavastatin ($C_{20}H_{15}FN^-$) on the top image and trandolapril ($C_{24}H_{33}N_2O_5^-$) on the bottom image. The images show the vertical drug's distribution through the implant. Data are presented as mean values \pm SD.
